DETAILED ACTION

Applicants' arguments, filed 19 April 2005, have been fully considered. Rejections and/or objections not reiterated from previous office actions are hereby withdrawn. The following rejections and/or objections are either reiterated or newly applied. They constitute the complete set presently being applied to the instant application.

Claims 1-15 are currently pending.

Claim Objections

Claim 2 is objected to because of the following informalities: Claim 2 recites "further comprising the **steps** of". However, there is only one step recited. Appropriate correction is required.

Claim Rejections - 35 USC § 112

The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

Claims 1-15 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

Claims 1, 3, 5, 6, and 8 recite "a common one of functional characteristics **including** enzymatic, metabolic, transporting, and cell cycle functions". The term "including" is vague and indefinite, as it could encompass other functional characteristics than recited in the claims. Also,

Art Unit: 1631

what is a “common one”? Is the function common to all biopolymers in a group or is a functional characteristic merely a well-known (i.e. common) one? Clarification is requested.

Claims 5 and 6 recite “searching a selected subtree for keywords”. It remains unclear what is intended for the relationship between the step of clustering biopolymers based on experiments into a dendrogram and then searching for keywords. Where do the keywords come from? Do the biopolymers comprise the keywords or does the information association with biopolymers comprise the keywords? Clarification is requested.

Claims 5, 6, 12, and 15 recite “count of biopolymers whose biopolymer information contains at least one of the searched keywords”. This is an implied limitation and it is unclear if the biopolymer information is actually intended to include the keyword or not. Clarification is requested.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(a) the invention was known or used by others in this country, or patented or described in a printed publication in this or a foreign country, before the invention thereof by the applicant for a patent.

Claim 1 is rejected under 35 U.S.C. 102(a) as being anticipated by WO 99/09218 (Berno: Publication date of 25 February 1999; PTO Form 1449 of 26 Feb. 2002).

Berno teaches a system and method for detecting differences in sample polymers, such as nucleic acid sequences, by clustering the hybridization affinity information of the sample biopolymers. Specifically, Berno teaches clustering the biopolymer information (see Figure 9;

Art Unit: 1631

page 10. lines 15-25) and selecting subtrees (see example 503 in Figure 9) and displaying the subtree in a separate window (see Figure 11), wherein the groups include functional characteristics (hybridization affinities).

Berno anticipates the limitations of claim 1.

No claims are allowed.
